ABSTRACT

The Pragati Lab Information System is a simple C++-based console application designed to provide quick access to laboratory details in an academic environment. The system allows users to input a floor and room number to retrieve information such as the number of systems, fans, lights, chairs, projectors, and air conditioners available in a lab. This reduces dependency on manual inquiries and improves efficiency in accessing lab-related data.

Introduction

In many institutions, students and staff often need information about laboratories such as infrastructure and availability. Traditionally, this requires asking lab assistants or checking manually, which is time-consuming.

This project aims to solve this problem by:

- Providing instant lab details

- Reducing manual effort

- Improving accessibility of lab data

The system is implemented using C++, making it lightweight and easy to run on any system.

Flowchart (Text Representation)

START

Input Floor

Input Room Number

Check Floor & Room Match?

YES

NO

Display
Details

Show Error
Message

END

ALGORITHM

Step1: Start the program.

Step2: Declare variables for floor and room.

Step3: Take input from the user (floor and room).

Step4: Call the function displayLab().

Inside the function:

Step5: Check floor and room using if-else conditions.

Step6: If matched → display lab details.

Step7: Else → display “Invalid Floor or Room”.

Step8: End program.

Methodology

The project follows a simple procedural approach:

The user provides input through the console

The system processes input using conditional statements (if-else)

Based on matching conditions, relevant lab data is displayed

If no match is found, an error message is shown

This approach ensures:

Simplicity

Fast execution

Easy modification and scalability

RESULTS

```
main.c... Output [Icons]
Enter Floor (ground / first / third): first
Enter Room Number / Lab Code: F18-19

Marvin Minsky Lab:
Systems: 72
Chairs: 75
Fans: 17
AC: 4
Lights: 9
Projector: 1

=== Code Execution Successful ===
```

```
main.c... Output [Icons]
Enter Floor (ground / first / third): third
Enter Room Number / Lab Code: T-2

Engineering Drawing Lab:
Systems: 66
Fans: 6
Chairs: 68
Lights: 6
Projector: 1
AC: 2

=== Code Execution Successful ===
```

```
main.c... Output [Icons]
Enter Floor (ground / first / third): first
Enter Room Number / Lab Code: F-9

Invalid Floor or Room!

=== Code Execution Successful ===
```

Conclusion

The Pragati Lab Information System successfully provides an efficient way to access lab details. It simplifies the process of retrieving information and minimizes manual effort. The project demonstrates the practical use of C++ in solving real-world problems in an academic environment.

Future Work

This project can be improved by:

- Adding a Graphical User Interface (GUI)
- Storing data in a database
- Developing a web or mobile application
- Adding search and filter options
- Including real-time lab availability status
